

Error Reasons for EMandate

Reason	Explanation	Next Steps
<code>already_declined</code>	The bank has already declined a similar mandate registration attempt by the customer. NPCI blocks retry attempts to avoid duplicate requests to the bank.	The customer must retry after 24 hours.
<code>authentication_failed</code>	The customer has entered incorrect card or bank login details.	The customer must use the correct card details to complete the registration.
<code>bank_account_invalid</code>	The bank account is not valid. The customer or bank could have closed the account.	The customer must try using a valid bank account or another method.

bank_account_validation_failed	The third party validation failed as the given bank account details were incorrect or could not be verified.	The customer should check the bank account details provided and try again.
bank_technical_error	The destination bank was facing technical problems when the payment was attempted. This usually occurs when the Core Banking System encounters a technical error while processing the payment.	The customer must try using another bank account or try after sometime.
card_expired	The customer is making the payment with an expired card.	The customer must use a different card or method.
card_number_invalid	The customer has entered an incorrect card number which is not part of any BIN/ IIN.	The customer must enter the correct card number.

debit_instrument_blocked	The customer is using a blocked card or account to complete the registration. The account or card could have been blocked by the bank or by customers themselves.	The customer must retry with a different method.
debit_instrument_inactive	The customer is using an inactive or frozen card to complete the payment. The card could have been marked inactive by the issuer or by customer themselves.	The customer must use a different card or method.
duplicate_request	A payment initiation request with the exact same parameters was passed to the gateway. The gateway is blocking duplicate requests.	The customer must retry after 30 min.

gateway_technical_error	Payment failed due to a technical error at the gateway. This usually occurs when the gateway server encounters a technical error while processing the payment.	The customer must retry after some time.
incorrect_card_expiry_date	The customer has entered an incorrect expiry date of the card.	The customer must enter the correct expiry date of the card.
incorrect_cvv	The customer has entered an incorrect CVV to complete the payment.	The customer must retry with the correct CVV.
incorrect_otp	The customer has entered an incorrect OTP to complete the payment.	The customer must retry and enter the correct OTP.
incorrect_pin	The customer has entered an incorrect PIN to complete the payment.	The customer must retry with the correct PIN.

insufficient_funds	The customer does not have sufficient funds in the account to complete the payment.	The customer must retry with sufficient balance in account.
joint_account_not_allowed	The customer has tried to register the mandate on a joint account which is not allowed. Banks usually allow mandates to be registered on sole ownership accounts only.	The customer must retry with a different account.
otp_attempts_exceeded	The customer has entered the wrong OTP multiple times and exceeded the limit. Some issuers limit the number of OTP retries, beyond which the card is temporarily blocked.	The customer must retry using a different method or after some time.

payment_cancelled	The customer has explicitly cancelled the payment due to which the authentication failed to complete.	The customer must retry to complete the payment.
payment_failed	Destination Bank or Gateway has declined the payment due to business or technical reasons. The exact reason in this case is not communicated to Razorpay.	The customer must use a different method or retry after some time.
payment_pending_approval	The payment is currently pending approval by the bank.	Please wait for sometime for the payment status to be updated, or retry after sometime.

payment_risk_check_failed	Payment declined due to risk checks. Risk checks are performed by Razorpay, Gateway and Issuer Bank. The source parameter would give additional clarity where the risk check failed.	The customer must not proceed with the payment at this time.
payment_timed_out	The customer did not complete the transaction within the specified time. This error may also happen when no response is received from the gateway.	The customer must retry and complete the transaction within the time.
server_error	Technical error at Razorpay's server. This usually occurs when there is some server issue at Razorpay's end.	Please retry after some time or reach out to Razorpay.

transaction_limit_exceeded	The customers have exceeded the credit or debit limit set on their accounts. This error usually arises while doing high value transactions.	Please retry after informing the customer to update their transaction limits.
user_not_registered_for_netbanking	The customer's bank account is not registered for netbanking.	The customer should register their account with the destination bank for netbanking.

Error Reasons for Subsequent Payments

Reason	Explanation	Next Steps
bank_account_invalid	The customer's bank account is either closed or no longer valid. The customer or bank could have closed the account.	The customer must re-register for the mandate.

bank_account_validation_failed	The bank could not validate the customer registration for debiting the customer.	Please retry after some time or reach out to Razorpay.
bank_technical_error	The destination bank was facing technical problems at the moment the payment was attempted. This usually occurs when the Core Banking System encounters a technical error while processing the payment.	Please retry after some time or reach out to Razorpay.
debit_instrument_blocked	Withdrawals on the customer's account are temporarily blocked by the bank.	The customer must reach out to their bank to get the account unblocked.

<code>debit_instrument_inactive</code>	Withdrawals on the customer's account are temporarily blocked by the bank.	The customer must reach out to their bank to get the account unblocked.
<code>gateway_technical_error</code>	Payment failed due to a technical error at the gateway. This usually occurs when the gateway server encounters a technical error while processing the payment.	Please retry after some time or reach out to Razorpay.
<code>incorrect_ifsc</code>	The bank IFSC code is no longer valid.	The customer must re-register for the mandate.

<code>input_validation_failed</code>	Payment failed due to wrong request or input sent in the payment request. This is also seen while creating a payment with incorrect parameter values on the Dashboard.	Rectify the validation issues and try again. Check the error description and field parameters for more information about the error. Check your integration/payment request or reach out to Razorpay. Refer to the API Reference Guide .
<code>insufficient_funds</code>	The customer does not have sufficient funds in the account to complete the payment.	Please retry after asking the customer to add funds to their bank account.
<code>invalid_amount</code>	Amount or currency passed in the payment request is not supported or invalid. This can arise when you pass a different variable type in the amount field or pass an unsupported amount value.	Check your integration and payment request.

<code>mandate_not_active</code>	The registered mandate is no longer active. The customer or bank could have cancelled the mandate.	The customer must re-register for the mandate.
<code>payment_cancelled</code>	The customer has explicitly cancelled the payment. The customer could have given a cancellation instruction to their banks.	Please retry after informing the customer to remove the cancellation request.
<code>payment_declined</code>	Destination Bank or Gateway has declined the payment due to business or technical reasons. The exact reason in this case is not communicated to Razorpay.	Please retry after some time or reach out to Razorpay.

payment_failed	Destination Bank or Gateway has declined the payment due to business or technical reasons. The exact reason in this case is not communicated to Razorpay.	Please retry after some time or reach out to Razorpay.
payment_mandate_not_active	The registered mandate is not yet activated at the bank. Banks sometimes take longer to activate the mandates at their end.	Please retry after some time or reach out to Razorpay.
payment_timed_out	The bank where the mandate is registered could not debit the customer's account in time.	Please retry after some time or reach out to Razorpay.

<code>server_error</code>	Technical error at Razorpay's server. This usually occurs when there is some server issue at Razorpay's end.	Please retry after some time or reach out to Razorpay.
<code>transaction_limit_exceeded</code>	The customers have exceeded the credit or debit limit set on their accounts. This error usually arises while doing high value transactions.	Please retry after some time after informing the customer to update their transaction limits.
